Usage Billing, Service Credits, and SLA Adjustments

FICTIONAL TRAINING DOCUMENT — designed for RAG/agent testing; no real company, policy, SLA, customer, or price is represented.

Metered usage

Selected add-ons are billed by monthly consumption. Records aggregate in UTC and finalize within 24 hours after month end; portal usage may be estimated before finalization.

Meter	Unit
Automation executions	1,000 billable executions
Document processing	1,000 processed pages
Premium API transfer	1 GB egress
Long-term log archive	1 GB-month average stored volume

Usage disputes

Request Invoice ID, affected meter, expected quantity, and supporting customer records. Billing compares invoice and metering data; Technical investigates missing, duplicated, delayed, or defect-associated meter events.

Fictional SLA credits

Monthly availability	Growth	Enterprise
≥ 99.90%	None	None
99.50-99.89%	5%	5%
99.00-99.49%	10%	10%
< 99.00%	20%	25%

Starter has no financial availability SLA in this fictional policy. Enterprise contracts can override percentages.

Credit base and exclusions

Apply the percentage to the recurring fee of the affected service, not total customer spend. Exclude taxes, professional services, third-party pass-through charges, unrelated products, announced maintenance (≥72h), customer-caused configuration/quota failures, customer IdP/network/application failures, preview/free features without SLA, and contractual force-majeure exclusions.

Technical evidence required

• Incident ID/severity; verified UTC start/end.

• Affected regions/services; full outage vs degradation.

• Known exclusions such as scheduled maintenance.

• Final incident status. Root-cause analysis need not be complete if downtime is already verified.

Request window and calculation

Request SLA credit within 30 days after the affected billing month unless contract differs. Late requests require Billing lead approval. Example: Growth service fee EUR 199 and monthly availability 99.30% → fictional 10% credit = EUR 19.90 before contract caps/adjustments.

Multiple incidents and caps

Combine eligible incidents within the month for availability calculation. Credits do not stack above the maximum monthly percentage for the tier/contract. Service credits apply to future invoices and are not automatically cash refunds.

Ownership

Question	Owner
Was Northstar unavailable?	Technical
Exact verified incident window?	Technical
Plan/contract eligible?	Billing
Credit amount and invoice application?	Billing
Root cause?	Technical / incident review

Dispute examples

Portal shows higher estimated usage before month close: wait for finalization unless anomaly is extreme. **Duplicate meter events suspected:** Billing opens Technical investigation and does not guess usage. **Customer requests cash for outage:** apply SLA-credit rules unless another contractual/refund basis exists.

Evidence in billing case

• Account/Invoice/Subscription IDs and billing month.

• Affected meter/service and customer expectation.

• Incident ID if availability-related.

• Contract/SLA tier and prior credits in same month.
